EXPERIENCE

Senior Software Engineer

Union.ai | Platform Team

Bellevue, WA: Jan 2025 - present

Responsible for infrastructure and identity platform for self-managed enterprise customer deployments

- Delivered GCP Terraform modules for a big tech enterprise customer's Controlled Availability release
- Implemented Azure Entra ID identity provider and RBAC authorization across Go services and Helm charts
- Managing dozens of customer Kubernetes clusters on the Union platform plus several test and staging CI clusters

Senior Software Engineer

Meta | DevInfra

Bellevue, WA: Dec 2024 - Nov 2025

Steward of the production macOS fleet used for remote execution of build and test workflows across Meta

- Managed the platform for tens of thousands of rack-mounted Mac mini hosts in Meta datacenters
- Worked on migrating workflows to virtual machines (VM's) running on the production macOS fleet
- Created a pipeline in Python and Hack (PHP dialect) to produce daily VM images to run existing workflows
- Reduced fetch times for VM workflows by 67% by implementing a persistent cache in Rust

Senior Software Engineer

NerdWallet | Infrastructure Engineering

Remote: Feb 2022 - Aug 2024

Responsible for the continuous integration and deployment (CI/CD) platform across NerdWallet

- Supported teams with CI/CD on GitHub Actions, Jenkins, Terraform, AWS, ArgoCD, and Kubernetes
- Proposed and implemented key components of a new CI/CD platform for use by ~150 engineers
- Maintained and added new features to shared libraries in Python and Go related to infrastructure
- Mentored two junior engineers on my immediate team with career development

Software Engineer II

Indeed.com | Delivery Engineering Group

Seattle, WA: Oct 2018 - Feb 2022

Maintained and supported Indeed's CI/CD pipeline built on Jenkins

- Reduced build times by 23% and outages by 84% by federating a monolithic Jenkins controller to Kubernetes
- Pushed for continuous delivery adoption across the company with "push on green" initiative
- Lead a team of two other engineers focused on resolving build dependency issues across the company

Software Engineer II

Uber | Build and Dev Tools

Seattle, WA: May 2017 - Jul 2018

Designed and built a unified build system for all teams across Uber

- Forked and adapted Go Dep (since deprecated in favor of Go modules) for project dependencies at Uber
- Adapted Buck (written in Java) to work in Uber's build system to build Go projects
- Mentored 1 long-term intern from Ada Developers Academy

Software Development Engineer I

Amazon | Builder Tools (2015-2017)

Seattle, WA: Sep 2013 - May 2017

- Responsible for PackageBuilder, the build system for Version Sets that built all software packages at Amazon
- Implemented features in Java Spring services and Perl scripts that were part of the build system

Prime Now (2014-2015)

- Wrote Javascript and Java for the first mobile app to enable 1-hour delivery to customers in 2014
- Mentored 1 intern for the summer working closely with them to deliver a new feature for the app

Financial Ledger and Accounting Systems (2013-2014)

- Onboarded Amazon teams to fully-automated accounting system in Java

Software Engineer

GE Oil & Gas | Bently Nevada

Minden, NV: Jun 2012 - Sep 2013

- Tested firmware and software for a new project on the ADAPT product line for the subsidiary Bently Nevada

SKILLS

Python | Rust | Java | Go | CI/CD | Kubernetes | Jenkins | GitHub Actions | Docker | DataDog | AWS | Terraform
Technical Writing | Mentoring

B.S., Computer Science - Utah State University, Logan, UT
